DON’T USE LASER PRINTERS

for program listings and other printouts
which do not require laser-quality fonts

(i.e. any file other than a .PS file).

Instead, use the

Fujitsu High Speed Band Printer

which is much faster than the laser printers.

Athena command:

```
%lpr -Ping <filename>
```

If the high speed printer doesn’t print, make sure its start/stop light is toggled on.
