

File No. 6925

**CLASSIFIED EYES ONLY**

**Project 3721 - SNOWDRIFT**

These are instructions for how to construct a program that will close a Class IV rift. You will need to construct a device capable of storing the program and uploading to various terminals. The materials needed to construct this device are stored in a number of labs in Dunwich. The first six pieces can be found in the Turing Lab.

Six more pieces can be found in the Church Lab.

*[out-of-game: ... what the hell is wrong with the Laundry's printers? The rest of the printout is too smudged to read.]*
