

File No. 7104

CLASSIFIED EYES ONLY

Project 5982 - SNOWDRIFT

These are instructions for how to construct a program that will close a Class IV rift. You will need to construct a device capable of storing the program and uploading to various terminals. The materials needed to construct this device are stored in a number of labs in Dunwich. The first six pieces can be found in the Turing Lab.

Six more pieces can be found in the Church Lab.

Six more pieces can be found in the Dansey Lab.

[out-of-game: Dammit, here we go again... off to another lab and then another printer.]
