AUTO IMAGE COMPOSITION

Michael A. Bennie & Biyeun M. Buczyk

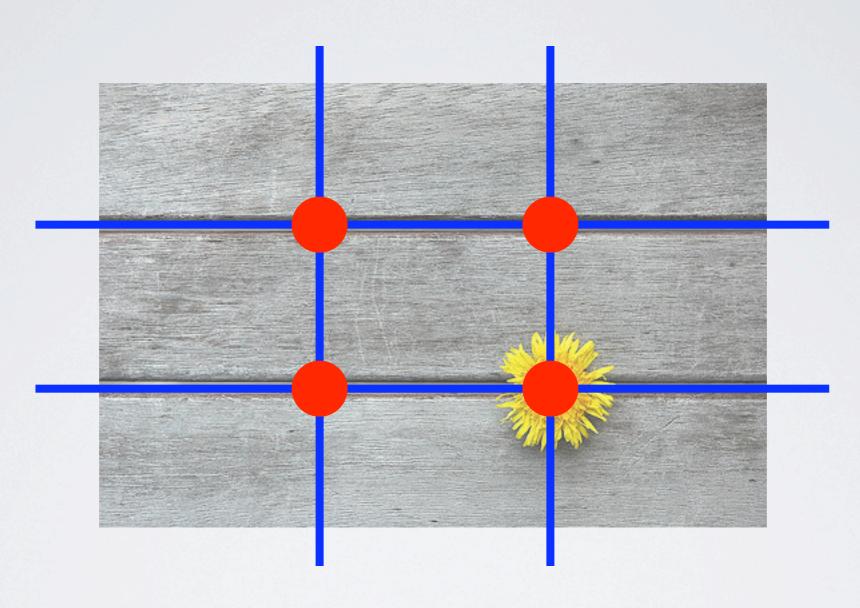

How it works: Scoring the Image.

L. Liu et al. 2010. Optomizing Photo Composition. In EUROGRAPHICS 2010.

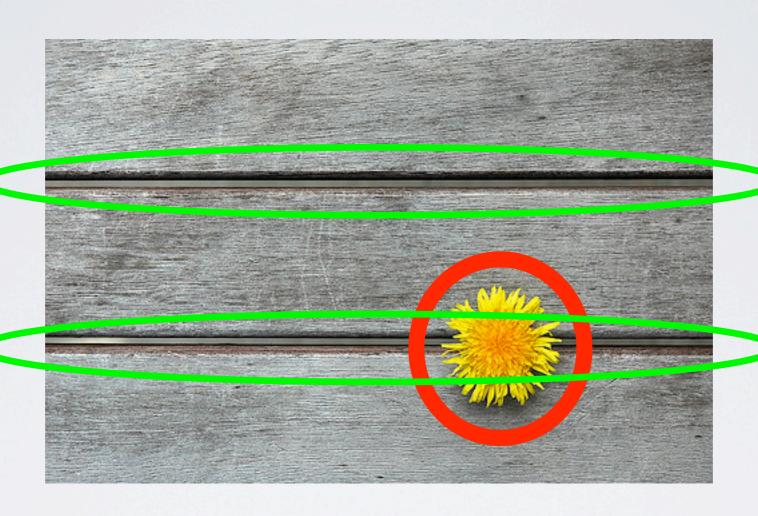

Basic Composition Rule: Rule of Thirds

Power Points

- Calculate object distances from power points.
- Calculate line distances from power lines, with emphasis on horizontal, then vertical, and finally diagonal.

 Also need to know salience (visual importance) of line or object.

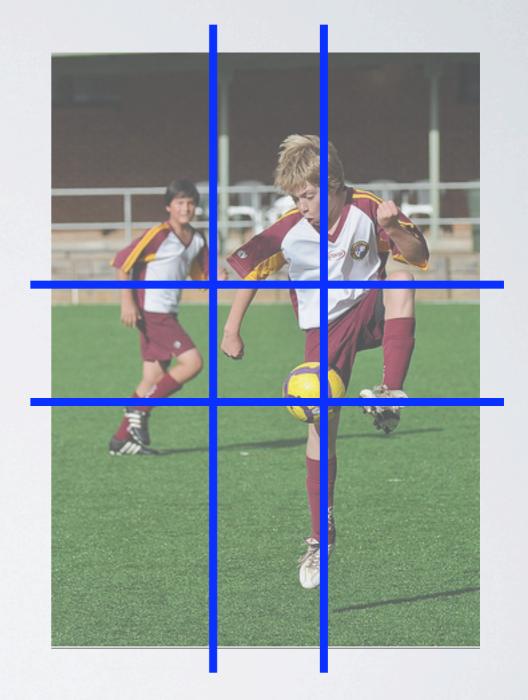

- Simplified: Sum up the best distances weighted by salience for different features and get a score.
- Weigh each feature score to get a total score (e.g. 50% lines and 50% objects, then 75% rule of thirds, 25% diagonal rule).

It gets more complicated.

Diagonal Rule

Golden Mean/Section...

Saliency Map

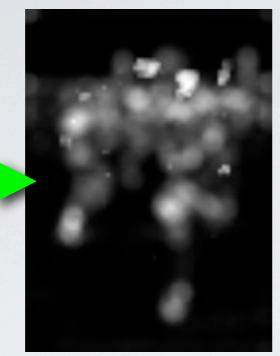

spectral residual (Hou and Zhang)

face detection (Gabor features, neural network - Sakhi)
