seminar.sty:

A LaTeX style for slides and notes

User's Guide

Timothy Van Zandt*

8 May 1992
Version 0.92

seminar.sty is a LaTeX document style for typesetting slides or transparencies, and accompanying notes. It has many advantages over SliTeX. Here are some of the style's special features:

- You can use any fonts that work with LaTeX, including PostScript fonts and $\mathcal{AMS}$Fonts.
- Slides can be landscape and portrait within the same file.
- Color is supported through PostScript.
- It is a LaTeX style, rather than another format.
- It is compatible with $\mathcal{AMS}$-LaTeX.
- The slides can have a frame and a colored background.
- The magnification can be changed with a single command.
- Overlays can be produced from a single slide environment.
- Accompanying notes, such as the text of a presentation, can be put outside the slide environments. The slides, notes or both together can then be typeset in a variety of formats.

Some of these features require a PostScript output device.
