NAME

xwafeping – an x-based front end for ping

SYNOPSIS

xwafeping [**-c** *colormode*] [**-h**] [**-u** *update interval*] [host1] [host2] ...

DESCRIPTION

xwafeping is an x-based front end for ping, which repeatedly determines for each given host its reachability via TCP/IP. If the host can be reached an upward thumb is displayed, otherwise a thumb pointing down. *xwafeping* uses the program ping (see manual page ping(1)) to test the reachability.

For all given hosts the reachability is tested every 90 seconds. If no host is given, default hosts (@ftpServers from *xwafeftp*) are assumed.

OPTIONS

In addition to the standard toolkit options such as -display, -name, -geometry, -iconic, -xrm etc. (see manual page X) xwafeping accepts the following options:

-c *colormode* start xwafeping using the given color-mode (for details see manual page wafeapp); color modes are for example *mono*, *blueish* or *wheat-ish*.

-h show a short usage message.

-u *update interval* used to specify a non-default interval in seconds, in which the charts are updated. The default update interval is 90 seconds.

KEY BINDINGS

<Key>q quits the application

ENVIRONMENT VARIABLES

WAFELIB location of the wafe library (typically /usr/lib/X11/wafe)

PERL VARIABLES

Wafe (Perl-) Variables from $WAFELIB/system.waferc or $HOME/.waferc:

$backGround back ground color

FILES

```
$WAFELIB/system.waferc
$HOME/.waferc
```
