3. Change: Missing field in Expect header

3.1 Change Classification

1 – New Feature, Major Change or Market Effecting Change	[]
2 – Bug Fixes	[X]
3 – Clerical Corrections	[]

3.2 Change Summary

The current definition of the Expect header field violates the encoding rules defined in section 8.4.1.2. These rules make it possible to find out the length of the field value. This makes it possible for an implementation to skip a header without interpreting the value. However Expect-expression can consists of many separate null terminated strings.

3.3 Change

8.4.2.63 Expect field

The following rule is used to encode Expect values:

Expect-value= 100-continue | Expect-expression

Expect-expression = Value-length Expression-var Expression-Value

Expression-var = Token-text

Expression-value = (Token-text | Quoted-string) *Expect-params

Expect-params = Token-text Expect-param-value

Expect-param-value	=	Token-text		Quoted-string
100-continue	=	<Octet 128>
