

Results

- Proton magnetic moment: $(1.424 \pm 0.083) \cdot 10^{-26} \text{ J/T}$
 - ▶ Accepted value: $1.411 \cdot 10^{-26} \text{ J/T}$
- $\frac{1}{T_1}$ grows linearly with Fe^{3+} concentration
- $\frac{1}{T_2}$ grows faster than linearly with Fe^{3+} concentration
